SUMMARY

Junior Full Stack Developer with experience building and maintaining web applications using modern full-stack technologies. Fall 2025 Computer Science graduate with a background in software development, artificial intelligence, and automation. Passionate about staying at the forefront of AI and finding creative ways to leverage technology to build innovative tools and solutions while continuously expanding my technical expertise.

EDUCATION

BOSTON UNIVERSITY

Boston, MA

Bachelor of Arts: Computer Science

Graduated Dec 2025

Relevant Coursework: Software Engineering, Artificial Intelligence, Algorithms, Data Structures, Probability, Data Science

University Work Experience: CS412: Full-Stack Development Undergraduate Course Grader

Sep 2025 - Dec 2025

EXPERIENCE

GIFTOGRAM

Whippany, NJ

Junior Full Stack Developer

Apr 2026 - Present

- Contributing to full-stack web application development through ticket-based feature additions, bug fixes, and other related enhancements. Contributing in QA efforts and participating in on-call support rotations for operational troubleshooting.
- Developing internal tooling, AI-driven improvements, and automation solutions including Playwright-based QA automation workflows to improve development efficiency and ensure application quality.

JERSEYSTEM

Remote

AI Specialist

Mar 2026 - Jun 2026

- Supported organization-wide AI adoption by developing training materials, instructional videos, and user guides, while researching enterprise AI capabilities and identifying practical use cases to improve cross-department workflows.
- Assisted in the development and optimization of Google Gemini Gem and NotebookLM chatbot solutions through prompt engineering, feature experimentation, workflow testing, documentation, and user enablement focused on AI best practices.

BAUSCH + LOMB

Bridgewater, NJ

AI Automation Developer Intern

Jun 2024 – Aug 2024

- Developed AI chatbot prototypes in Microsoft Copilot Studio for both department-specific and enterprise-wide deployment, integrating company knowledge bases, action features, and conversational workflows to improve employee self-service.
- Automated complex business processes using Power Automate and the Microsoft Power Platform while creating interactive AI training videos and a company micro-training portal to increase employee adoption and AI literacy.

PROJECTS *(See Portfolio Project)*

ExoCollect - Virtual Planet Discovery Web Platform | *Django, Python, PostgreSQL*

Aug 2025 - Present

- Co-founded ExoCollect, a full-stack Django web platform where users "discover" uniquely generated virtual planets with attributes inspired by real astronomical frequencies. Developed user authentication, procedural planet generation algorithms, and interactive archive and leaderboard pages with advanced filtering and sorting capabilities.
- Deployed a public demo using Heroku and PostgreSQL, gathering user feedback through forms and an official LinkedIn page to guide future platform improvements while gaining experience managing a live web application.

Knomi - Personal Discovery Platform | *Laravel, PHP, MySQL*

July 2026 - Present

- Developed Knomi, a full-stack web application that enables users to create customizable, shareable profile pages featuring ranked lists, personalized link hubs, and dynamic content cards. Built authenticated CRUD functionality, reusable components, drag-and-drop list management, and a scalable tab-based architecture to support future expansion.
- Deployed a live beta available to real users, gathering feedback to refine the user experience, identify bugs, and guide ongoing feature development and platform improvements.

YouRise AI - YouTube Analytics & SEO Tool | *React, Django, External APIs* Mar 2026 - Apr 2026

- Developed YouRise AI, a React/Next.js and Django-based AI-powered web application that analyzes YouTube videos and delivers insights on performance, engagement, and SEO. Integrated the YouTube Data v3 and OpenAI APIs to create a seamless user experience, with custom scoring algorithms for deeper analysis

MassMoney - Lottery Game EV Calculator Web App | *React, Next.js, MongoDB* Nov 2025 - Dec 2025

- Collaborated on MassMoney, a React/Next.js web application that serves as a continuously updated expected value calculator for Massachusetts scratch-off lottery games, featuring responsive design, real-time data scraping, and MongoDB persistence.

EXTERNSHIPS

EXTERN Remote

Outamation: AI & Automation Extern Jul 2025 - Sep 2025

- Constructed AI-powered Retrieval-Augmented Generation (RAG) pipelines for automated document processing, utilizing Python, PyMuPDF, FAISS, SentenceTransformers, Gemini, LLaMA, and Gradio to create an interactive chatbot experience.

Epic Games: Game Development & Design Extern Jun 2025 - Jul 2025

- Designed and developed a fully functional Rube Goldberg machine within Unreal Engine using Blueprints and other physics-based tools. Produced a final video complete with narration and effects to present to the team at Extern and Epic Games.

COGNIZANT Remote

Generative AI Extern Apr 2025 - Jun 2025

- Developed AI-driven solutions utilizing Python, including API integration with popular large language models (LLMs) for automatic text completion, fine-tuning models to enhance accuracy, and prompt engineering for performance optimization.
- Acquired hands-on experience with key Generative AI concepts and technologies, including transformer architectures, LLMs, Generative Adversarial Networks (GANs), machine learning fundamentals, and AI bias/ethics.

LANGUAGES

- | | |
|--------------|--------------|
| ● Python | ● TypeScript |
| ● PHP | ● Java |
| ● JavaScript | ● OCaml |

TECHNOLOGIES

- | | |
